Is your PC is doing weird things? Such as it locks up unexpectedly or error messages appear for no reason.

When you search online, ads for X-rated products appear?

It's right you should think there might be a virus in your computer... but what do you do about it?

This is a situation that happens all over the world, every second of the day. It might make you feel alone, but believe me when I say there are a lot of you with this problem!

Your course of action could make matters worse if you get the wrong advice or follow the correct path.

Someone, maybe even a friend told you they downloaded some free antivirus removal software, but did they tell you it could have been bogus software designed to hold you are your computer to ransom?

Grandma used to say 'There's nothing as false as a free lunch' and this also applies to antivirus firewall software.

There are honest companies that do offer free versions of their software which may indicate your computer has a virus infection, but usually you will need to buy antivirus removal software (the full version) to fix the problem.

The free version almost never fixes the problem, just confirms you have one!

We recommend you buy antivirus protection as soon as you get a new computer, don't rely on the pre-installed version, if there is one.

The most common question is: 'If we decide buy antivirus removal software, which should we choose?

The majority of computer and internet users are not computer nerds or geeks! They are normal everyday people like you and me.

We want a solution we know will do the job right from the beginning.

So our antivirus firewall software solution needs to be able to identify, isolate and remove all viruses, malware, adware and spyware. These include things like worms, trojans, keyloggers, rootkits, and crimeware.

Essentially any software program that is installed on your system without your consent. But that's not all it needs to be able to achieve.

The best antivirus software needs to be updated almost instantly when new threats developing worldwide. Release fixes and code for combatting and removing these problems must be available to prevent infection of your computer.

It's now time to buy antivirus firewall software, usually there will be a subscription license for 12 months. However some quality providers offer 24 or 36 months subscription with substantial discounts.

Agreeing to the extra time of coverage means you save more than renewing each year.

Some computer stores offer boxed versions that you then need to pay an extra cost to keep updated.

Usually the word cheap implies that the item in question is somehow questionable. That cheap car you bought, the cheap nail polish you tried or the cheap meat you thought you would taste. Luckily, there's nothing defective/lacking about cheap antivirus software.

There is a growing trend towards free software and antivirus programs are no exception. As more and more PC users see the value of keeping their most confidential information private, software developers are catching on to the fact that lower prices means success in this competitive industry. This article will explore the difference between cheap antivirus software and free antivirus, and help you choose the best to suit for your needs.

Free vs. cheap antivirus software

With so many great free antivirus programs around, it's hard to believe that people are willing to pay for the service at all anymore. Some IT professionals swear by their collection of free antivirus programs, anti spyware scanners and free firewalls. Free antivirus is just getting better and better.

However, this doesn't mean that it isn't worth it to pay for your antivirus software. Many of the free antivirus programs don't quite measure up to the paid ones in a few subtle ways. With paid-for programs, it's guaranteed that the support staff will be able to help you in the event of a virus getting through your defense system. In addition, if you are infected, they will be able to quickly create a patch to add to your software, which will remove the offending item. Many free or cheap antivirus users complain of lack of support staff.

Many of the free antivirus software programs have massive communities online that are filled with expert users willing to help. In addition, there are a variety of great free products that can be used in combination for guaranteed protection against the widest possible range of threats.

Finding cheap antivirus software

Even the simplest internet search will reveal a wealth of cheap antivirus programs that are available for discounted rates. Be sure to sales, coupon codes and introductory specials on new products.

Some brands are known to be have different strengths when it comes to virus protection. One of the best known antivirus programs, Norton, has superior antivirus protection, but many users complain of slower operating systems after installation.

Safeguarding against unsafe antivirus software

In some cases, free or exceptionally cheap antivirus software is actually a virus masquerading as legitimate software. This is why it's essential to use only popular and widely trusted antivirus programs like Norton or McAfee. These fake antivirus/spyware programs might fool you into downloading an executable file (.exe) and trick you into allowing their malicious code access to your computer and all the information on it.

Whether you go cheap or for free, you need a reputable antivirus software program to keep you safe while you are online. Spend some time researching the various options and read as many software reviews as you can. Ask friends and family which antivirus programs they use.

With some research and a bit of know how, it's possible to find a fantastic cheap antivirus software program to suit your needs.
