

Protecting your PC can be challenging and expensive. Some people spend a lot of money every year buying antivirus software, antispyware products and personal firewalls. Nowadays, you should give a lot of importance to the virus protection of your PC to prevent people from stealing your personal information and identity, and secure your PC. But, what if you don't have money to pay for your computer security? There's no need to worry. You don't need to spend money when you can get high quality antivirus softwares for free. Why not take advantage of it?

The best 3 free antivirus softwares

o Avast Home Edition Free Antivirus - It is said to be the best FREE antivirus protection available in the market. It is for non-commercial and home use only. According to AV-Test.org, it is excellent when it comes to virus and spyware detection. It has a simple, customizable and functional user interface with complete features. It has a strong self-protection and automatic updates which also includes anti-spyware and anti-rootkit protection. Since it's made as simple as possible, it's very easy to operate. It is tried and tested in Windows security which supports more Windows versions than any other anti-Malware products.

o AVG Antivirus Free Edition - If you are after an award winning protection that will satisfy your basic security needs, this free antivirus is suitable for you. AVG has been providing the right to have computers secured for no charge. Many users claimed that AVG gives their PC protection from viruses, spyware and others. You will not get or spread viruses. Also give credits to the consistent high-speed PC performance, fast scanning and automatic updates. You will not be bothered if you download or exchange files online. Your PC will definitely be safe from harmful sites.

o Microsoft Security Essentials - A new free antivirus, and our favourite, from Microsoft which protects your PC from viruses, spyware and other malicious software. It is easy to install and use. You can use your PC and do other things while the automatic update is happening. It comes in small package with low resource usage and clean interface. All your files are being scanned to prevent a malicious file from harming your PC. This user-friendly software is created for consumers which assure your PC Malware protection.

These free antivirus softwares are different in many ways. Avast also has light resources and

high rate of false positives. Like Avast, Avira has light resources but outstanding detection rate of Malware but the updates is having problems or very slow. AVG Free Antivirus has grown in size and resource usage but slow scan speed. It has also Microsoft Security Essentials has a good detection rate, light resources but slow scan speed and long amount of time to quarantine Malware.

Fortunately, some of the best antivirus software also comes with their free versions that can be used in your PC at home. Some of these softwares are as good as the quality of any antivirus that you purchase online. For now, try using these free antivirus softwares and see for yourself what software suits and works the best for your PC.

Securing your PC is not as easy as you know. You have to protect your PC from viruses and other Malwares.
